SUMMARY

Highly experienced professional with four-decade career assisting the oil and gas industries with major developments, or developing markets. Assists pipeline organizations in formulating environmental, engineering, and construction plans, and participates in their implementation. Also assists major oil and gas firms, and international EPC and consulting organizations in developing business planning and market entry strategies and subsequent tactics. Active in Business Planning and Business Development practices.

Served as an advisor to many of the major oil and gas companies on environmental matters for large upstream and downstream projects. Served as a field manager for the precedent setting Oil Spill Contingency Plan for the Trans Alaska Pipeline. As a Senior Project Manager and a Principal managed over 30 major natural gas, carbon dioxide, crude oil and coal slurry pipeline environmental, geotechnical, and contingency planning contracts for large pipeline systems. Clients included most of the multinational oil and gas companies, the major EPC organizations and large regional utilities. While employed by a multinational forensic and risk-engineering firm, assisted in evaluating pipeline construction issues and operations. Prior to joining the engineering and consulting industry, was a member of the pipeline construction industry. Achieved the position of General Superintendent of Mainline Construction for major domestic and international pipeline constructors.

EDUCATION/CERTIFICATIONS

Master of Arts, Geography, University of Colorado, 1972. Thesis title: Human Perception and Adjustments to the High Wind Hazard in Boulder, Colorado.

Bachelor of Arts, Geography/Geology, University of Colorado, 1970.

PROFESSIONAL EXPERIENCE

Responsible for procurement, implementation, quality control, and overall technical and fiscal management for most of the listed projects. The exceptions occurred early in his career. For each project only the primary regulatory product is listed: Environmental Impact Statement (EIS), Oil Spill Contingency Plan (OSCP) or Study. Prior to project initiation and subsequent operation, additional regulations, stipulations and guidelines were addressed. For each EIS compliance effort requirements for the following were completed: cultural resources, threatened and endangered species, wetlands, river crossings, and land status being the most pervasive and significant. Each OSCP required the delineation of environmentally and culturally sensitive areas, and the development of operational and response techniques to mitigate or minimize adverse effects on these areas.
